

## DIGITAL GAME PORTAL TECHNICAL REQUIREMENTS

### **Is it required?**

Follow this guide only if you plan to use the Digital Game Portal to facilitate your game.

### **Number of devices**

You'll need 7 devices total (1 for the facilitator, plus 1 for each of the 6 player tables).

### **Types of devices**

You can use laptops, tablets, or a combination of both. Devices must be at least as large as an iPad mini. Do not use smartphones.

### **Software requirements**

You do not need any special software other than a web browser. The game is optimized for the latest version of Chrome or Safari. Acceptable alternatives include the latest version of Firefox and IE9 or later.

### **Settings & preparation**

All devices should be fully charged or plugged in. If playing with a larger group, we recommend propping player devices in the center of each player table for easy viewing and interaction.

Turn speaker volume to maximum on each player device. Check device settings for ways to turn off automatic notifications and auto-lock. This will help prevent the device from going dark or issuing non-game sounds (such as email notifications) during the game, ensuring a smooth playing experience.
